

Riversun Vine Guards

The facts....

Dimensions	Construction	Cane Stake Heights	Price (exc GST and freight)
450mm x 90mm square	Coated Cardboard	1.2mtrs	\$0.60
450mm x 90mm square	Coated Cardboard	1.8mtrs	\$0.65

NB: For all orders of 5,000 + guards, freight is included in the price.

A Height and Shape that Offers Real Benefits

At 450mm in height x 90mm square, the size and shape of Riversun vine guards enables you to maximise shoot growth while ensuring natural circulation of air around your vines. The cardboard offers a more even temperature over plastic. Lower daytime temperatures will not cause early bud burst and soft, frost susceptible growth. Additionally, as your vines will not be crowded within the guards they will be no more susceptible to disease than an unguarded vine.

Wind Protection that Works

Wind protection for young vines is critical. In order for a vine guard to perform this function it needs to be securely anchored and must hold its shape so that it doesn't batter the vine and damage new shoot growth. A stake through easy to use holding and stabilising tabs secures your Riversun vine guard to ensure its stability.

Spray Protection without Concern

Protection against damaging sprays is one reason vine guards are used. It is well known that while simple plastic sleeves offer excellent protection, they can make working with the vine more problematic, while some corrugated guards allow the possibility for leaves to be exposed through the side closures, so leaving the vine vulnerable to spray damage. Riversun vine guards offer excellent protection while maintaining ease of management.

Constructed from Easily Disposed of Materials

While Riversun vine guards are constructed of durable coated card, they are easily disposed of, no longer will you have large pallets or bins of plastic guards to dump.
